

Sheet -2 (LinkedList)

Solve the following problems at both the User and Implementation Levels.

1. Write a function to destroy a given LinkedList.
2. Write a function to move first node to last in a given LinkedList.
3. Write a function to move last node to front in a given LinkedList.
4. Write a function to clone a given LinkedList.
5. Write a function to insert a node in a specific position in a LinkedList.
6. Write a function to sort a given LinkedList.
7. Write a function to move even nodes to the end of a LinkedList.
8. Write a function to merge to given LinkedList.
9. Write a function to find the n^{th} node from the end in a given LinkedList.
10. Write a function to check if a given LinkedList is a palindrome or not. (ex. level, refer, radar)
11. Write a function that transform a list to a mirror list (ex. abccba).
