

## Sheet -3 (Stack)

---

**Solve the following problems at both the User and Implementation Levels [Array Based – Linked Based].**

1. Write a function that returns the first element entered to a stack.
2. Write a function to return the size of a stack.
3. Write a function that returns a copy from the last element in a stack.
4. Write a function to copy a stack to another.
5. Write a function to destroy a stack.
6. Write a function to print on the screen the contents of a stack without changing the stack.
7. Write a function to check if an expression has balanced parentheses. Input: "{[()]}" output: TRUE.
8. Write a function that deletes the minimum and maximum elements from stack.
9. Write a function that takes a stack as input and separates its elements into two different stacks: one containing even numbers and the other containing odd numbers.
